### EDUCATION

12<sup>TH</sup> RAJDHANI JR SCIENCE COLLEGE  
SCIENCE  
2021 – 2022

INSTITUTE OF BUSINESS MANAGEMENT  
**BCA**  
2022-2025

GANDHI INSTITUTE OF TECHNOLOGY  
AND MANAGEMENT  
**MCA**(currently pursuing)  
2025-2026

### SKILLS

- MERN Stack 
- Next.js 
- TypeScript 
- Git and GitHub 
- GSAP 

### ABOUT ME

I'm a full-stack developer who enjoys turning real-world ideas into working products. I build fast, reliable web apps from front end to back end, with simple structure, clean code, and a calm focus on users. I'm hands-on, curious, and not afraid to ship. I break big problems into small steps, deliver often, and learn from what people do, not just what they say. I like clear goals, open talk, and helpful docs. I care about performance, testing, and smooth deploys so teams can move quickly without stress. I enjoy pairing, giving feedback, and improving shared tools. Outside of work, I explore new tech and write small notes on what I learn. If you need someone who listens, builds, and improves with data, I'm ready to help.

### WORK EXPERIENCE

TETRA TRION IN-24-25  
full stack web development

Built many full-stack e-commerce app. I led the frontend with React and Tailwind for fast, mobile-friendly pages, reusable components, and smooth cart/checkout. On the backend, I designed REST APIs with Node and Express, secured routes, and integrated payments and auth. Data is stored in MongoDB with efficient queries and indexes. I set up error handling, logging, and basic tests to keep things stable. Deployed with an environment-based config and wrote clear docs so others can run it. The result: a responsive store with browsing, search, cart, orders, and admin controls.

- for frontend i use react and tailwind css
- for backend i use nodejs and express js
- for database i use mongodb
- for mail i used emailjs

### Projects

Built “Story Heaven”, an online bookstore, and “Imagify”, an image-creation site. Delivered end-to-end e-commerce features: product listings, carts, checkout, orders, and secure auth.

Designed REST APIs, integrated payments, optimized queries, and added image generation and editing tools, and error tracking. Focused on clean UI, fast loads, and mobile readiness and iterated from user feedback. Tech highlights: React, Node.js, Express, MongoDB, and cloud hosting. Result: reliable apps that handle real traffic and convert visitors into customers.

### EXPERTISE

- Strategic Planning 
- Communication 
- server handeling
